

WeRateDogs

Data Wrangling Project for
Data Analyst Nanodegree

Real-world data rarely come clean.
Using Python and its libraries, I
gathered data from a variety of
sources and in a variety of formats,
assessed its quality and tidiness,
then cleaned it.

The dataset that I wrangled,
analyzed, and visualized is the
tweet archive of Twitter user
`@dog_rates`, also known as
WeRateDogs.

WeRateDogs is a Twitter account
that rates people's dogs with a
humorous comment about the dog.

Insight # 1: The most common Tweets' source is Twitter for iPhone.

People like to use their phones more than other devices, and they usually don't prefer to use a third-party application.

Insight #2: The most common dog category is pupper, and the least is floofer.

Usually, people like puppies since they are cute and small. They remind them of their kids and be more empathetic.

Insight #3: The most common five dog names are..

01

Oliver

02

Cooper

03

Charlie

04

Tucker

05

Lucy

If you get a dog, you will most likely name it with one of these names unless you want a unique name.

Insight #4: A Labrador Retriever dog has the most favorite counts.

The Labrador Retriever was bred to be both a friendly companion and a useful working dog breed. According to the American Kennel Club, based on registration numbers, the Labrador Retriever has been America's favorite purebred dog for 17 straight years. The Labrador is a loving, playful, and very intelligent breed.

Reference: <https://labsrit.com/1959.html>

**Insight # 5: The minimum
rating is 0.**

Insight #6: The favorite_count is usually higher than the retweet_count.

Usually, people will press the favorite button to a tweet with an image in it since they are rating it and loving it.
